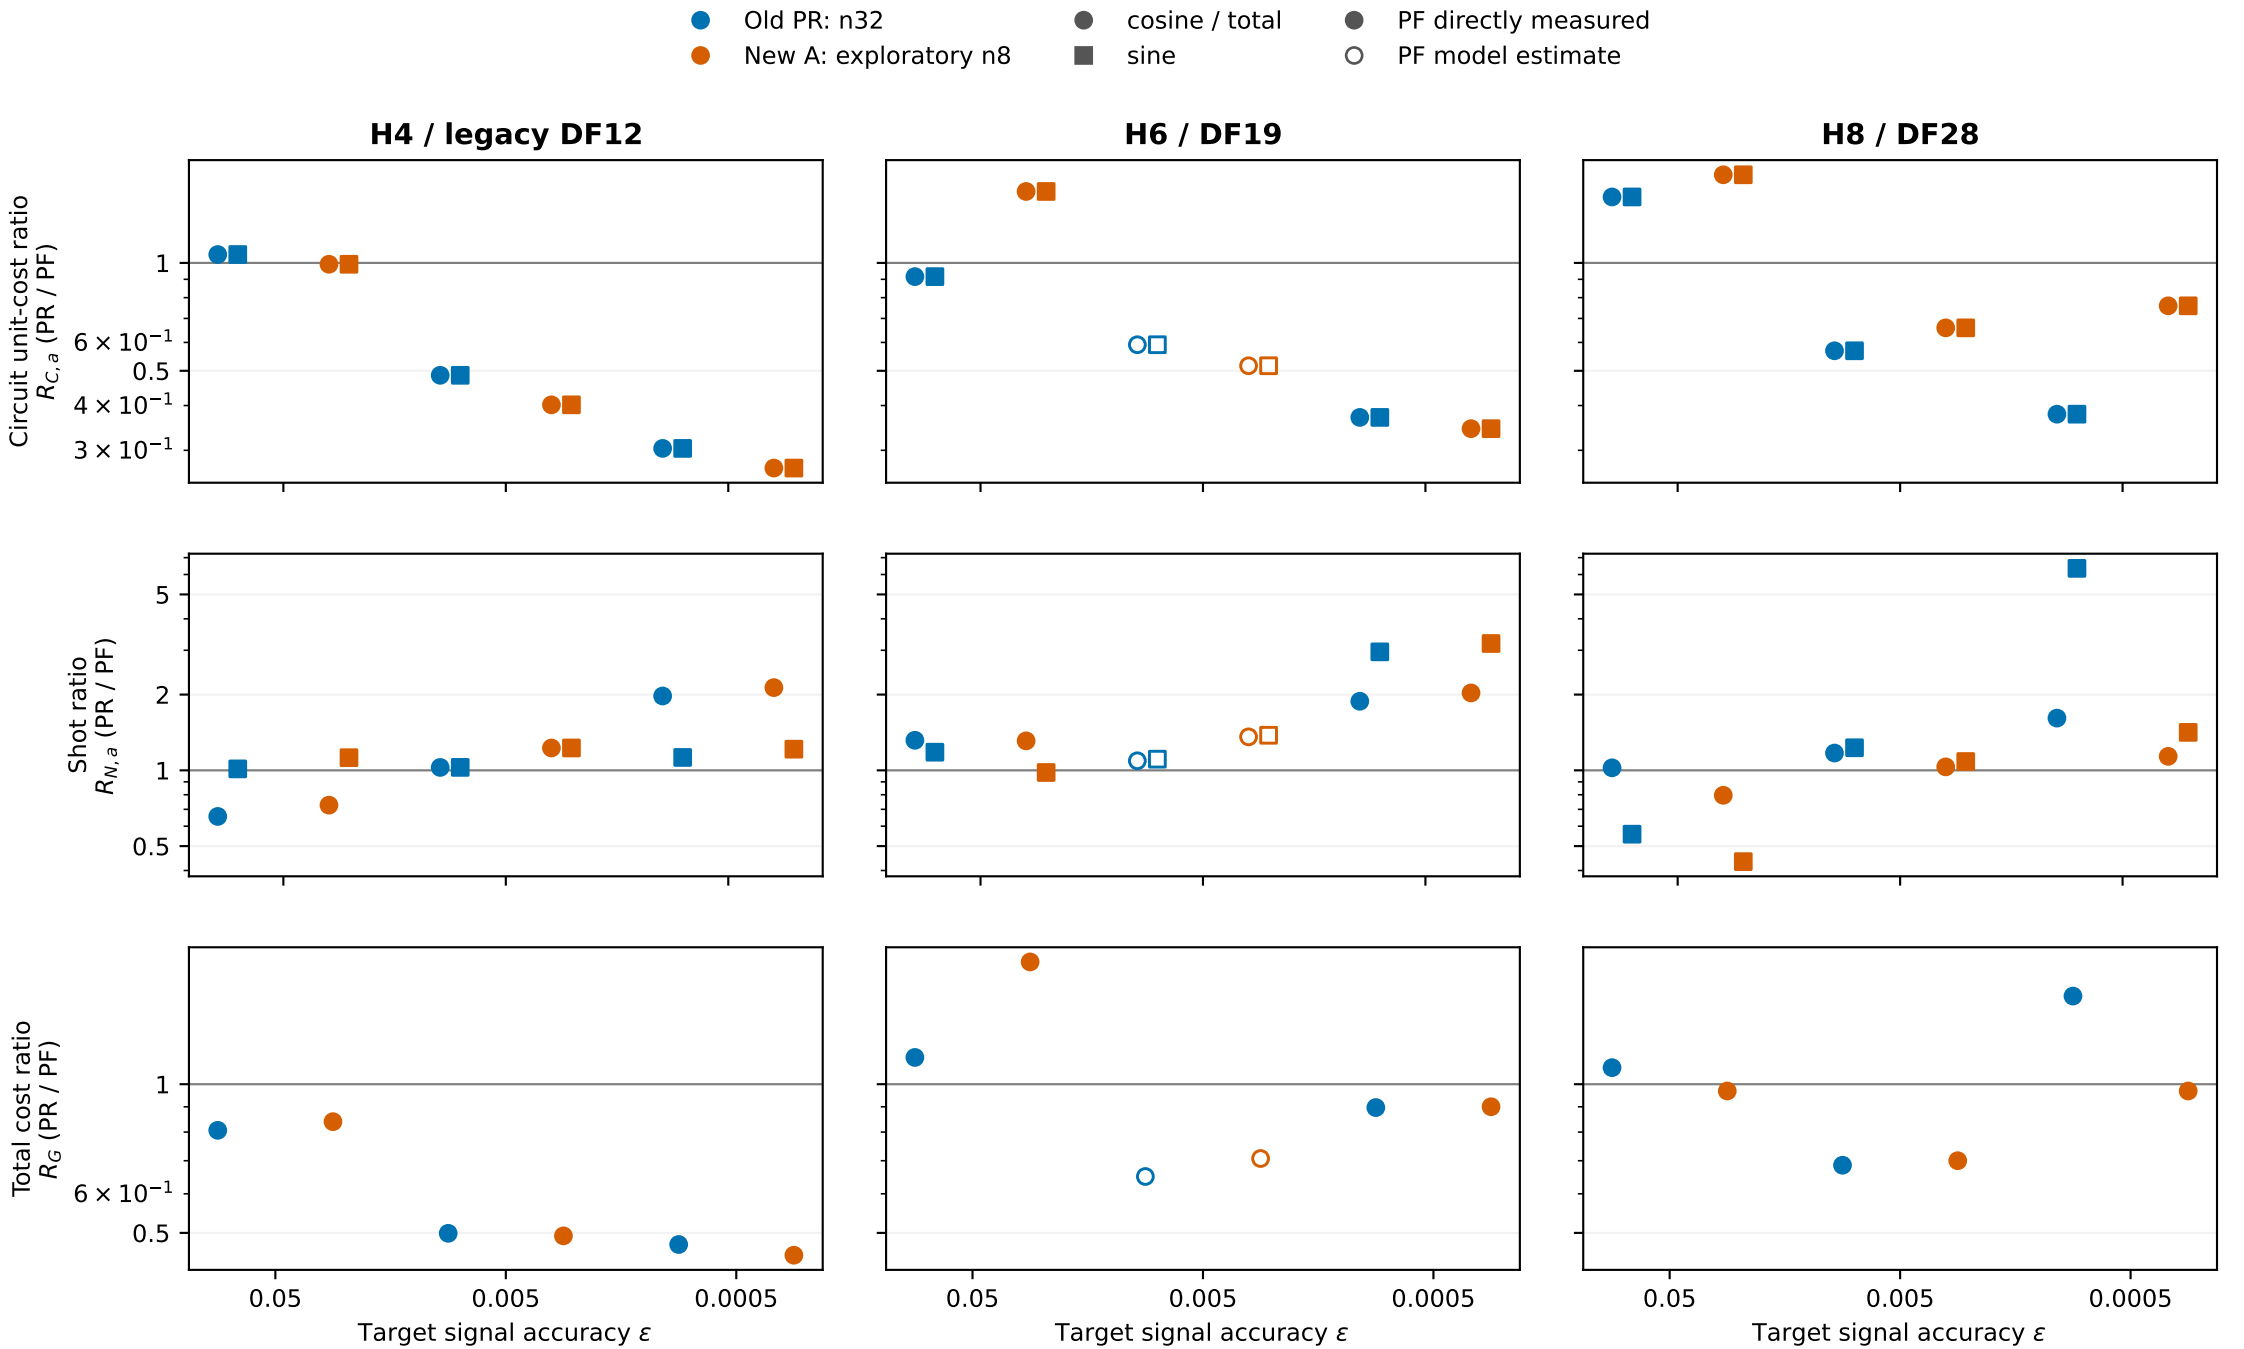
Figure 2A | Saved cost decomposition across three systems



Linear chains, 1 Angstrom, STO-3G; T=0.8; P=0; usual signed / factor 1. Cost ratios retain the original n8/n32 cohorts.
H4: old n32 is fixed-anchor selection/estimation; independent P completed separately (not plotted). H6/H8: old n32 is post-selection.
A82 core is present; its archived explanation remains missing pending separate numerical approval. Empirical, finite-sample evidence.
