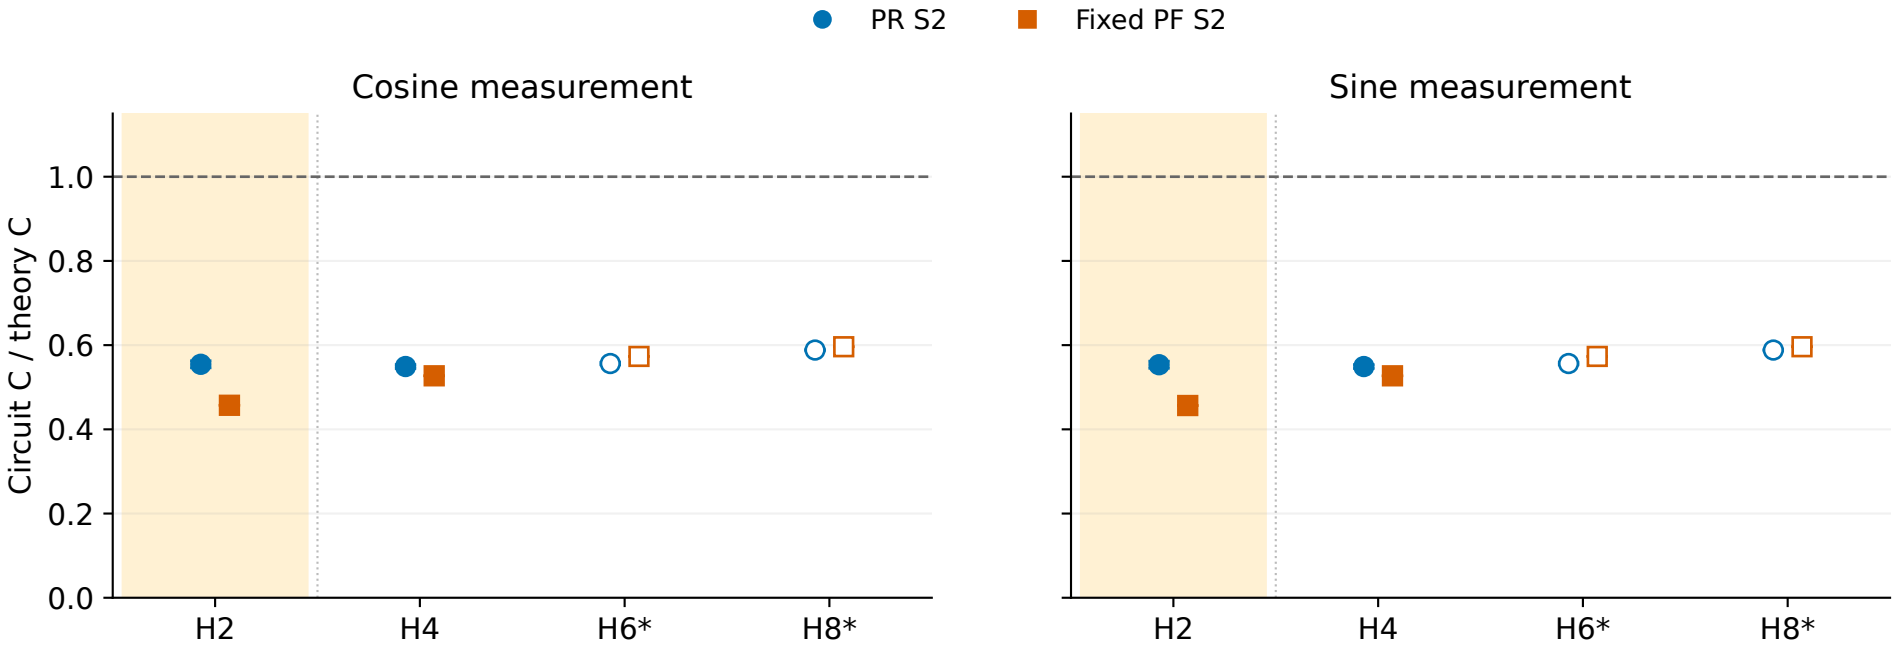
C | circuit unit cost epsilon = 0.01

Compiled / native theory; each measurement axis shown separately

H2: recovered original n=8 | H4/H6/H8: new cohort



Nominal 95% MC intervals for PR; theory endpoints are separate model bounds

* H6/H8: conditional only; auxiliary G-operator validation failed (threshold unchanged)

Fixed candidates | linear chains, 1 A, STO-3G | T=0.8 | native RZ, not paper Toffoli resources
