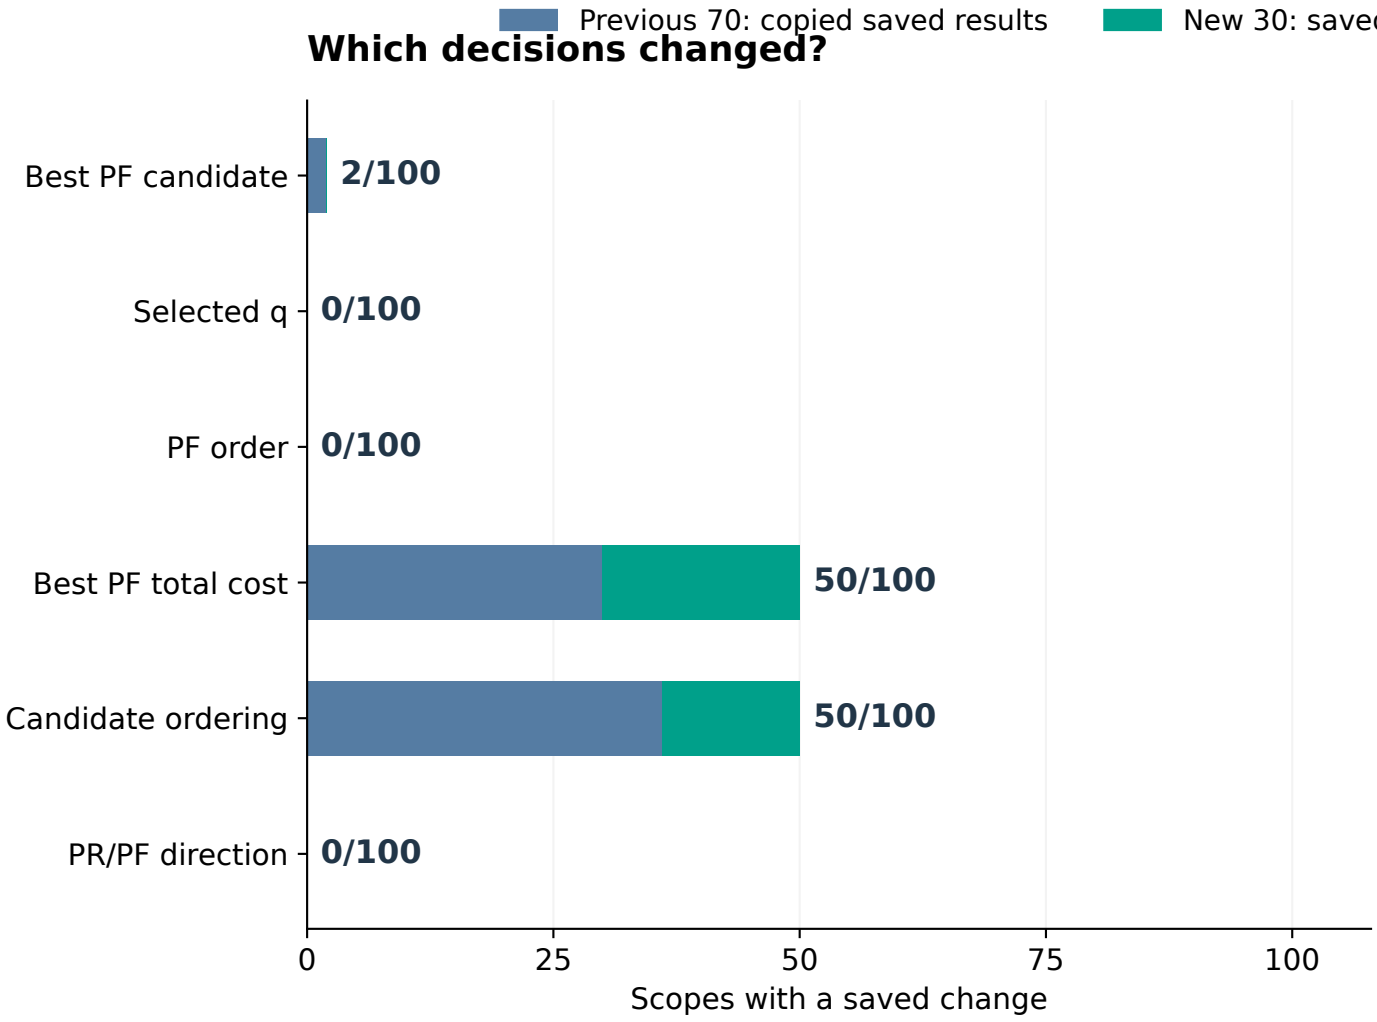
Sensitivity to replacing mixed unit prices with direct measurements

100 overlapping scopes · 40 unique system/bias/accuracy/allowance endpoints



Saved point-cost directions

90 PR lower

10 PF lower

Same directions under both price policies

H8: two saved prefix changes

prefix 16 → 15

q = 4 · fourth-order PF
PF remains lower-cost

Noncancellation, ε = 0.0005
Strengthened184; allowance factors 1 and 10
Both examples come from previous70

Saved summary only: q and PF order are unchanged; some PF costs and candidate rankings change.
Replacement sensitivity, not isolated model-error validation. Scope overlap is not 100 independent experiments.
Limits retained: profile/runtime differences; S4 hypothesis; missing initial final gate; pending old-profile axes.
Fixed H6/H8 domains; saved union8/union6 PR n32; no population-mean, unseen-event, or global-optimum guarantee.
