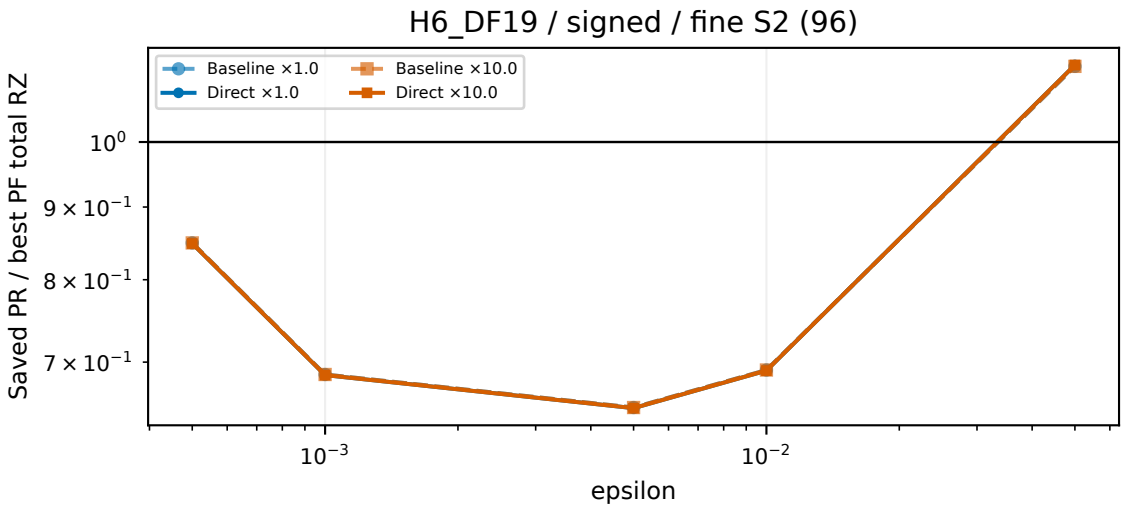
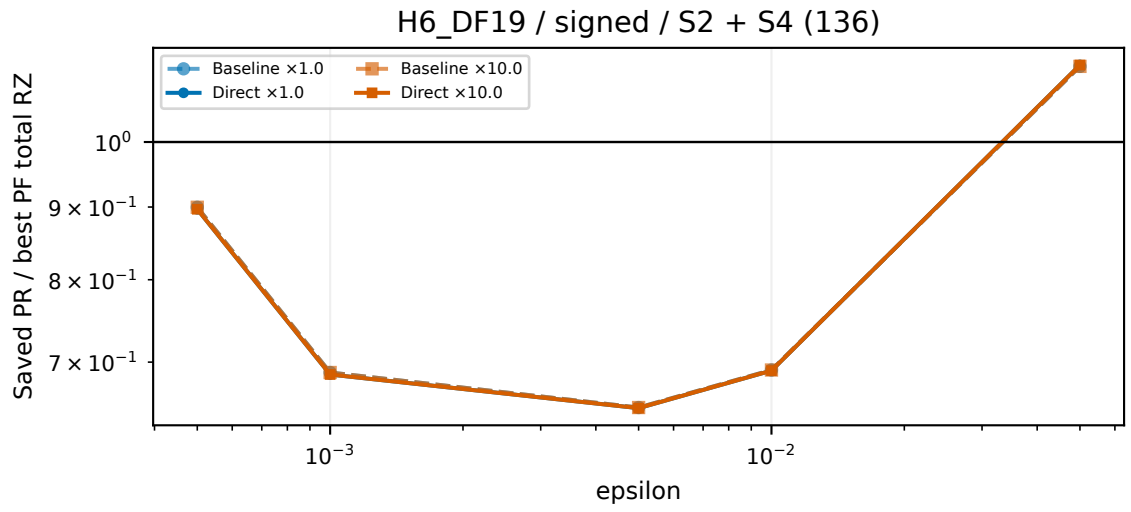
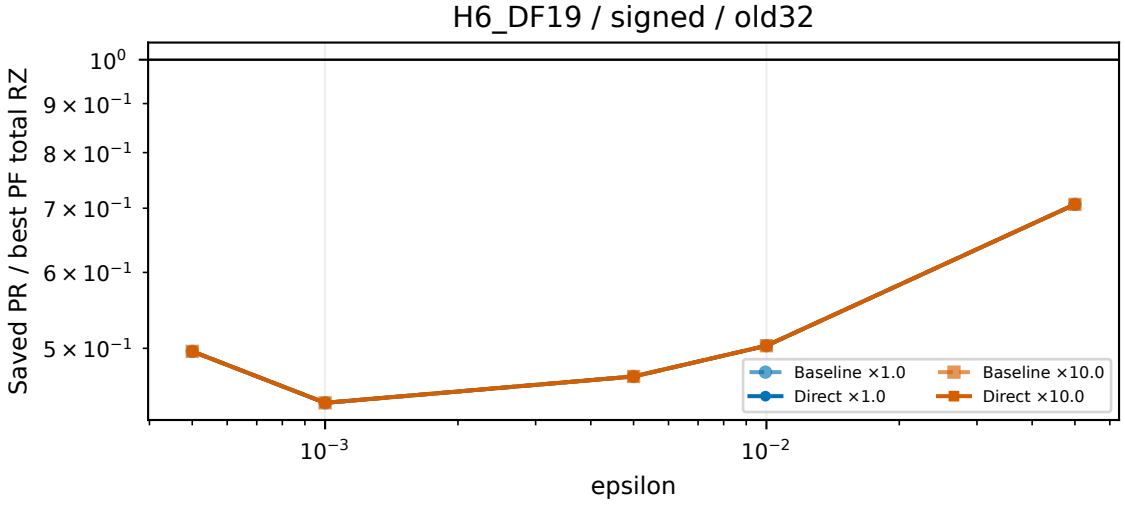
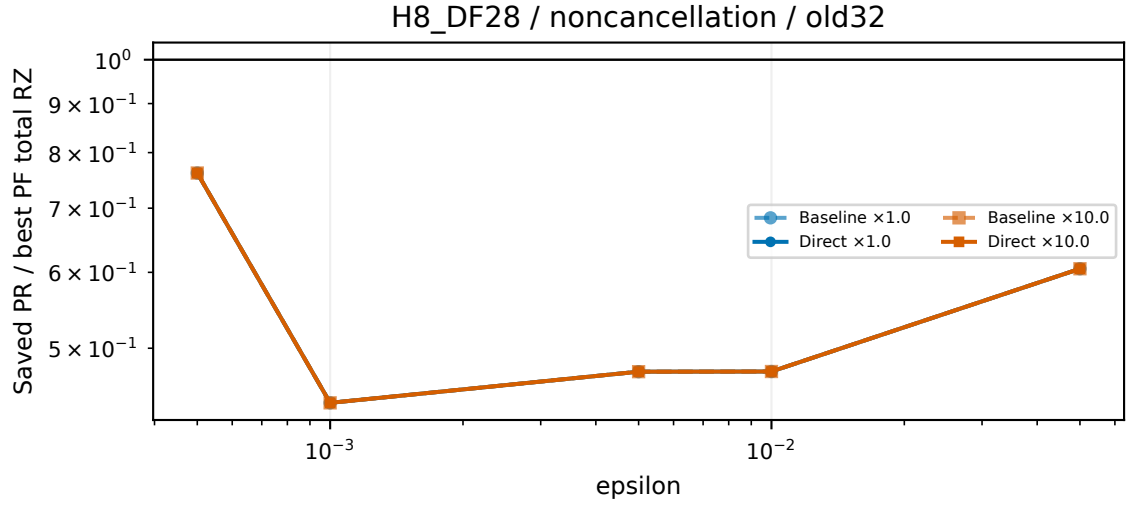
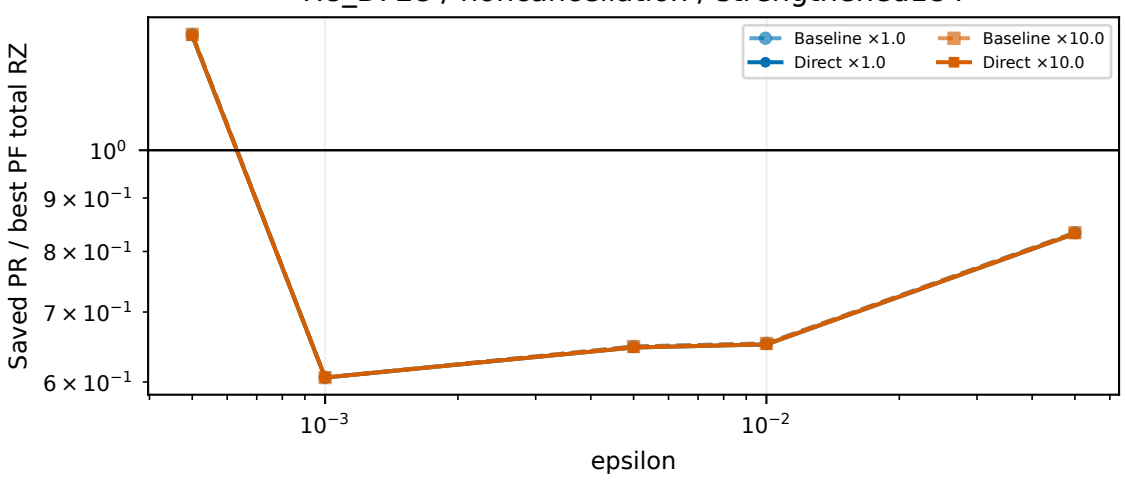
Baseline vs direct-price PF selection: PR/PF ratios

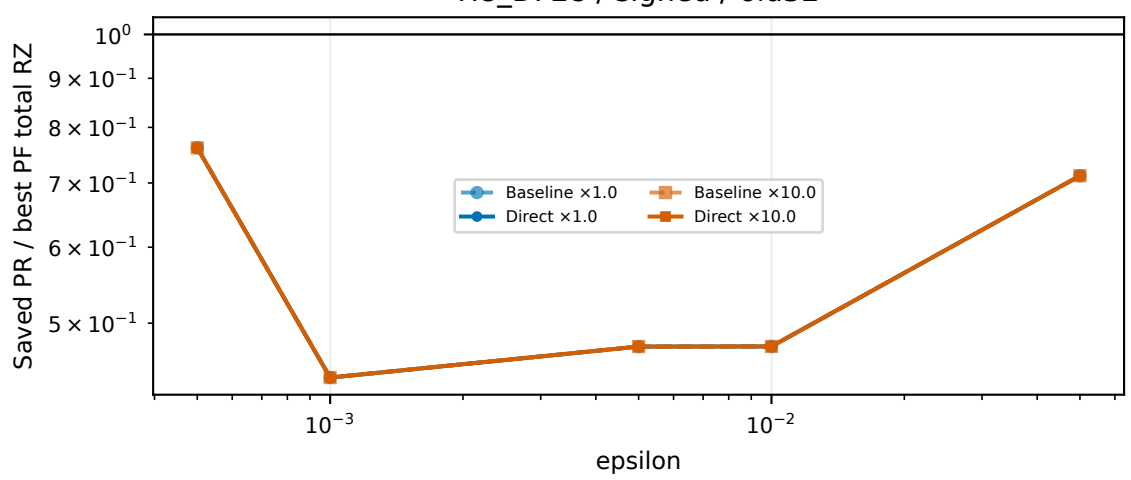


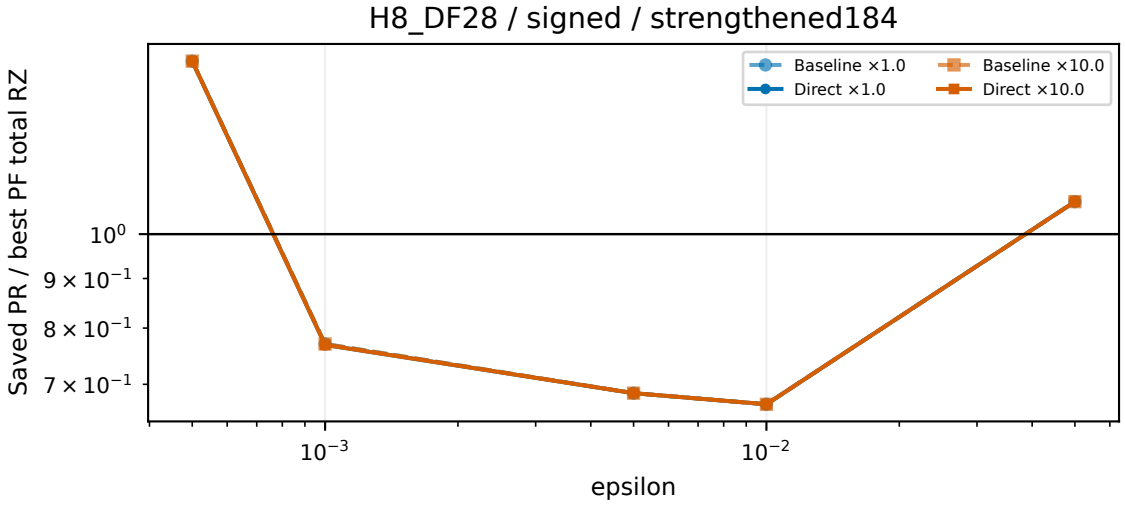












Below 1: saved PR costs less
Above 1: selected PF costs less

Scopes and factor rows overlap.
All 70 conditions retained; no new PR cohort.
This is a point comparison, not a population guarantee.

Conditional historical saved-cohort comparison: H6 profile differs; runtime equivalence unproven; S4 is a composition hypothesis.
Initial-run global final gate remains missing. Saved PR n32 costs/SE/cohorts and shots unchanged.
