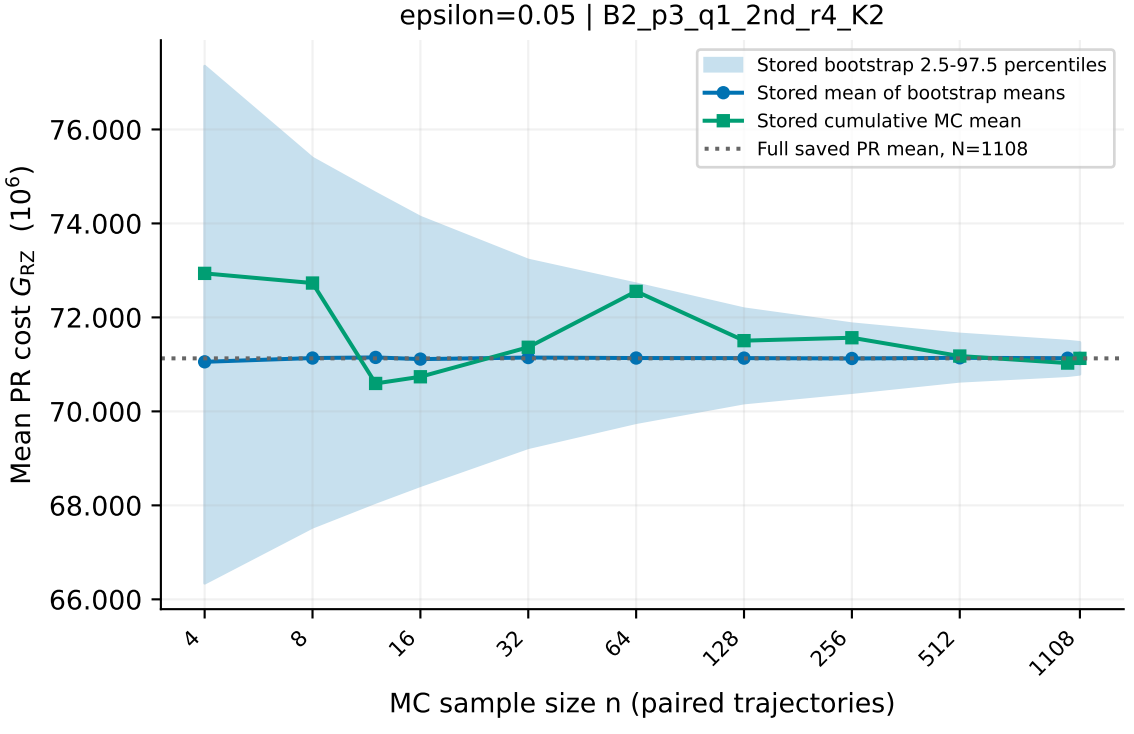
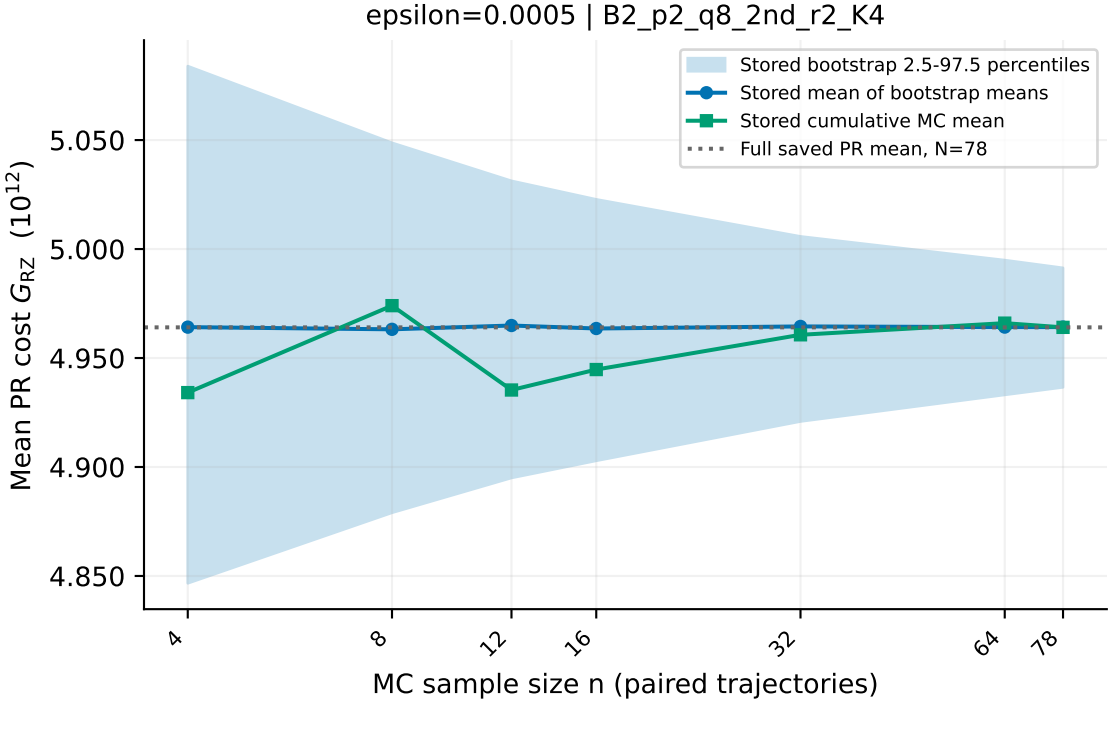
PR mean-cost estimation: smaller stored bootstrap spread at larger n





H4 1 A | STO-3G | tol-only DF10 | T=0.8 | P=0 | saved shots x full-wrapper compiled RZ
Deterministic prefix + stochastic RTE tail + full Hadamard wrapper. Stored values only; no new analysis.
Percentile band is conditional on saved pairs; it is not a population confidence interval. This is a mean estimate, not the total cost of n runs.
